Add a Code
Press the 5 button once
Enter a 2-digit passcode followed by the unlock button

Delete All Codes
(Recommended for initial set up:
Press and hold C button and wait for a series of confirmation beeps. You will have to hold the C button for about 10-15 seconds.

TROUBLESHOOTING
Low Batteries (Most Common Issue)
If the lock produces a longer set of rapid beeps and either locks or does not lock the door, you have low batteries. To avoid any difficulty during set up, make sure you are using brand new alkaline batteries. Using a battery tester is not recommended.

Door Jam Alignment
Make sure the deadbolt and the latch is in the door. Just line up so there is minimal resistance on the deadbolt as it extends and returns from the door.

Driver Bar Position
In step 2 of the installation, you are instructed to position the driver bar in the vertical position while the deadbolt is retracted. In step 3 of the installation, you are instructed to position the thumbturn exactly in line with the deadbolt latch pieces. If these parts are not positioned according to the instructions, you will encounter issues such as the lock only working with the key in the cylinder, a jammed thumbturn, or a key that will not release from the cylinder. The best thing to do is remove the lock from the door and install the lock according to the instructions provided.

Loose Keypad Connection
If not connected securely, the keypad wire harness connection may come loose and cause some of the numbers to operate incorrectly. To confirm your door lock issue is not being caused by a loose keypad connection, press every number on the keypad and confirm every button beeps when pressed.

If some of the numbers are not beeping, remove the back module (part B) and inspect the wires for any pinches or tears. Make sure to check the wires coming from the keypad as well. Disconnect the wire harness and make sure the pins in the male connection are not bent out of alignment. Reconnect your wires and confirm every button on the keypad beeps when pressed.

If you are still having keypad issues after following our troubleshooting guide, call us for a replacement under warranty.

Function Test
If a passcode has not been successfully programmed, the lock will not operate using the keypad. Let's check if a passcode has been successfully programmed in the memory.

1. Unlock the door lock and open the door. Make sure you keep the door open while troubleshooting.

2. Press the LOCK button on the keypad 1 time and listen to the beeps:
   - If the lock beeps 3 times and does not lock, it does not have a passcode set in its memory. Refer to the programming page for instructions on adding a passcode.
   - If the lock produces a longer set of rapid beeps and either locks or does not lock, you have low batteries. Replace the batteries with a set of premium "AA" alkaline batteries.
   - If the lock beeps 2 times and does successfully, it has at least 1 passcode stored in its memory and is operating correctly.

If you are unable to get your lock to work, please give us a call during business hours.

Battery Precautions
• Do not mix old and new batteries.
• Do not mix alkaline, standard (carbon-zinc) or rechargeable (nickel-cadmium) batteries.
• Remove batteries from product when storing for extended periods of time.
• Do not dispose of batteries as a fire or as trash.
• Follow your local battery disposal procedure.
• Do not puncture batteries, electric shock leakage from the battery is corrosive and can cause serious burns to the skin and eyes or skin. If swallowed, the electrolyte can be fatal.

Tools Required (not included):
X3 Phillips Screwdriver
X4 AA Batteries

[2- Switch on Part B] Left Hand & Right Hand Setting:
On the back module (part B), there is a switch labeled "1-2" which controls the left handed and right handed setting.
1 = Right Hand Doors 2 = Left Hand Doors
When entering the doorway, if the hinges are on the left, you have a left handed door. If the hinges are on the right, you have a right handed door.

GENERAL WARNINGS & CAUTIONS:
1. The back module (Part B) needs to be protected from the weather
2. Remote works up to 500 yards without obstructions
